

HANDS OFF!

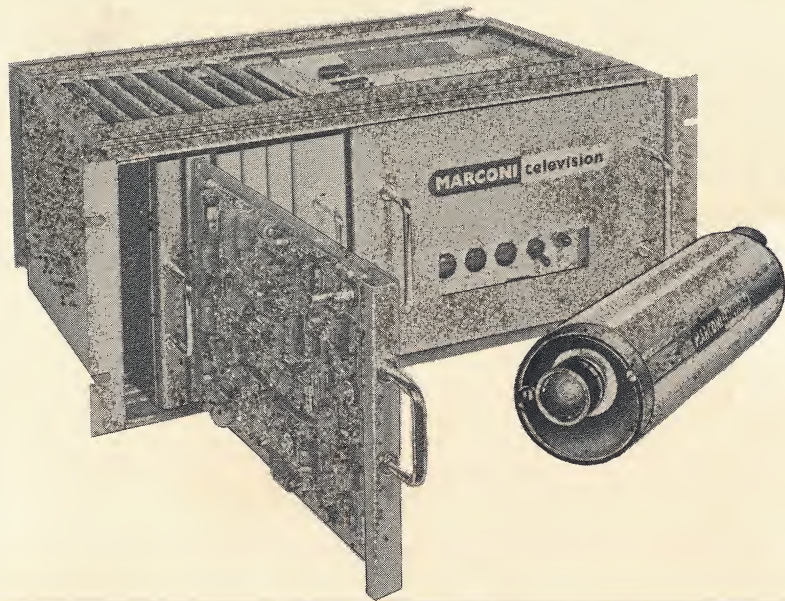

...a completely new approach to professional closed circuit television

Now Canadian Marconi brings fully automatic operation to professional closed circuit television with its "HANDS OFF" technique of operating on the 321 Series camera channel. So stable is this new equipment, that preset controls are used...the only operating control being a single on-off switch! The 321 Series is fully transistorized and consists basically of a small, lightweight, ultra reliable camera and control unit, connected by a multicore cable. The camera is only 3.5 inches in diameter and 14.5 inches long, and weighs 9.5 lbs. The control unit is extremely compact, and is available in either a free-standing or a rack-mounted version (illustrated) designed to fit a standard 19 inch rack. To these basic units may be added a wide range of accessories for use in a host of specialized fields of application including marine, airborne, military, industrial, educational, and broadcasting. Whatever the application, the 321 Series camera channel offers a combination of high electrical performance, low power consumption, economy of operation, and a higher resolution and picture quality than ever before.

THE 321 SERIES VIDICON CAMERA CHANNEL

OUTSTANDING FEATURES INCLUDE:

- No controls...fully automatic "HANDS OFF" operation
- Automatic sensitivity over extreme ranges of illumination
- Automatic black-level control
- Extremely high definition
- Solid State circuitry
- 'High Flux' Vidicon focusing
- Operates on all conventional scanning standards
- A/C or light weight battery operation
- Provision for intercom between camera and control unit
- Wide range of accessories (including camera housings, zoom lenses, and pan and tilt heads)
- Sealed waterproof camera
- Accommodation of scene illuminations from 2–2,000,000 ft. lamberts and temperature changes between -20°C and $+60^{\circ}\text{C}$.
- Pull-out component drawers.
